

GARAGE DOOR RADIANT BARRIER Heat Reflective Panels

INSTALLATION INSTRUCTIONS

1. Clean door off with window type cleaner to get dust and dirt off door.
2. Apply the adhesive tabs (use only per 6 per panel) on the raised panel corners to give the insulation panel the maximum distance from the door when installed.
3. Slip the panel in to the door panel and trim if necessary.
4. Fold the insulation panel horizontally and remove the tape paper on the top side, make sure the insulation panel is in the bottom tightly. Then fold the panel up and secure to tape. Fold the bottom up and remove the tape paper and secure the panel to the tape. Repeat in each panel.

Thank You For Choosing America's Best Home Products. Tell your friends! Send us a picture of your new insulated door and a testimonial to ray@coolmygarage.com and we'll send you a FREE Water Heater Jacket.
